

Guy Turner

Guy is Director of Commodity Research in Bloomberg New Energy Finance and founder of the carbon markets research business in New Energy Finance. Over the past 20 years Guy has worked extensively in the field of energy economics, climate change, renewable energy and emissions trading. Guy has spent much of his career analysing the theoretical and practical application of energy policies, in particular tradable allowances and tradable support mechanisms for renewable energy. He has advised numerous companies on the business implications of low carbon legislation, the Kyoto mechanisms and the EU ETS, and has worked for several governments to help design and implement emissions trading schemes.

At Bloomberg New Energy Finance Guy oversees the company's research to provide detailed insight into the world's carbon and power markets, including the provision of regular forecasts of carbon and Renewable Energy Certificate prices in Europe, North America and Australia. He is also responsible for the company's global energy and emissions modelling work to provide long term forecasts of emissions, abatement costs and investment trends in clean energy. Bloomberg New Energy Finance's clients include many of the world's largest investment banks, energy companies and asset managers.

Guy is a regular commentator on low carbon energy policies at conferences and on television. Guy holds degrees in Economics and Engineering from the University of Birmingham (UK), an MSc in Environmental Policy from Manchester University and is a graduate of the London Business School Corporate Finance Programme. He is also founding participant and active member of the Carbon Markets Association and a member of the Barclays Environmental Markets Index Committee.
