

What is the most likely scenario to develop in the future?

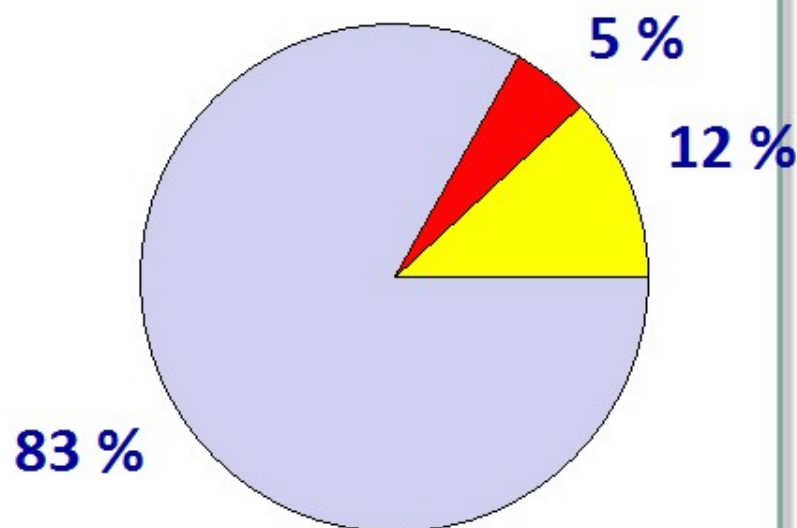

results

How will investments in the power sector be made in the long-term?

results

- 1 The energy-only market will by itself deliver investments
- 2 The customers will be the main investors (decentralised solutions)
- 3 Energy and capacity markets combined drive investments by utilities and customers will also invest in decentralised solutions

What will be the main task for regulation?

results

- 1 Keep grid costs as low as possible and guarantee free grid access to Retailers with a strong focus on efficiency and year on year cost reduction. Limited interventions.
- 2 Stimulate regional grid innovations and investments to speed up the Energy Transition, introduce new, efficient and competitive grid tariffs, which really correspond to the decentralized services that customers obtain from the grid
- 3 Active and important role for European regulation to integrate energy and capacity markets on European scale and ensure regional security of supply. Both on Retail side as well as the Grid side
