

## Which of the three scenarios do you see as most suitable for increasing decentralised energy systems?

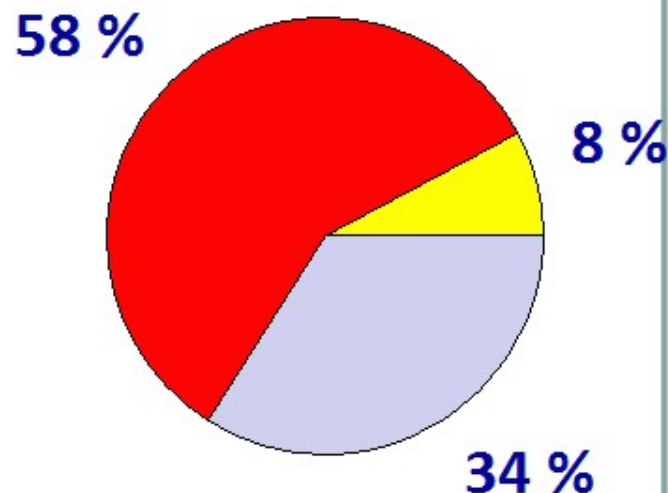

### results

## What is the role of utility companies in the development of distributed generation and storage?

### results

- 1 No role whatsoever - they are stuck in the past
- 2 Re-invent to be at the forefront (develop new business models; spin-offs/M&A; etc.)
- 3 Mild-cautious: They will pioneer some solutions without incentivising customers to get off the grid too much

## Beside Retail Utilities, which other market actor could seize control of the customer relationship in this field?

### results
